## linux ham software Linux Ham Software for TEN TEC Pegasus

Posted by Tom - 2009/07/22 03:59

---

Hi: This might be bizarre question on this reflector...but I need to ask... Does anyone (specifically hams) know if there is a way to run the Pegasus control software (windows) on Linux. I tried WINE but it performs miserably. Anyone know of anyone running this control software on Linux? Thanks in advance for your help, Tom Lau N8TL

That is Ham-Li...@mailman.qth.net or <http://mailman.qth.net/mailman/listinfo/ham-linux>. I thought I saw something there about that a while back. Good Luck Jim KD7JKT

Hi: This might be bizarre question on this reflector...but I need to ask... Does anyone (specifically hams) know if there is a way to run the Pegasus control software (windows) on Linux. I tried WINE but it performs miserably. Anyone know of anyone running this control software on Linux? Thanks in advance for your help, Tom Lau N8TL I think you have asked this question before. No person here even knows what a Pegasus is. It is a radio that requires a computer to display it's control functions. This is done using the serial port and the sound card. The problem is the maker of the radio did not make a Linux software. Without the software for Linux it is hopeless. You need to dual boot between Windows and Linux. Use Windows when you want to use your radio. Karl AKA K5DI
